1. About this document

1.1 Function

This operating instructions manual provides all the information you need for the mounting, set-up and commissioning to ensure the safe operation and disassembly of the safety-monitoring module. The operating instructions must be available in a legible condition and a complete version in the vicinity of the device.

1.2 Target group: authorised qualified personnel

All operations described in this operating instructions manual must be carried out by trained specialist personnel, authorised by the plant operator only.

Please make sure that you have read and understood these operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

The machine builder must carefully select the harmonised standards to be complied with as well as other technical specifications for the selection, mounting and integration of the components.

1.3 Explanation of the symbols used

Information, hint, note:

This symbol is used for identifying useful additional information.

Caution: Failure to comply with this warning notice could lead to failures or malfunctions.

Warning: Failure to comply with this warning notice could lead to physical injury and/or damage to the machine.

1.4 Appropriate use

The products described in these operating instructions are developed to execute safety-related functions as part of an entire plant or machine. It is the responsibility of the manufacturer of a machine or plant to ensure the correct functionality of the entire machine or plant.

The safety-monitoring module must be exclusively used in accordance with the versions listed below or for the applications authorised by the manufacturer. Detailed information regarding the range of applications can be found in the chapter "Product description".

1.5 General safety instructions

The user must observe the safety instructions in this operating instructions manual, the country specific installation standards as well as all prevailing safety regulations and accident prevention rules.

Further technical information can be found in the Schmersal catalogues or in the online catalogue on the Internet: www.schmersal.net.

The information contained in this operating instructions manual is provided without liability and is subject to technical modifications.

There are no residual risks, provided that the safety instructions as well as the instructions regarding mounting, commissioning, operation and maintenance are observed.

Operating instructions Safety-monitoring module

1.6 Warning about misuse

In case of inadequate or improper use or manipulations of the safety-monitoring module, personal hazards or damage to machinery or plant components cannot be excluded. The relevant requirements of the standards ISO 14119 and ISO 13850 must be observed.

1.7 Exclusion of liability

We shall accept no liability for damages and malfunctions resulting from defective mounting or failure to comply with this operating instructions manual. The manufacturer shall accept no liability for damages resulting from the use of unauthorised spare parts or accessories.

For safety reasons, invasive work on the device as well as arbitrary repairs, conversions and modifications to the device are strictly forbidden; the manufacturer shall accept no liability for damages resulting from such invasive work, arbitrary repairs, conversions and/or modifications to the device.

The safety-monitoring module must only be used when the enclosure is closed, i.e. with the front cover fitted.

2. Product description

2.1 Ordering code

This operating instructions manual applies to the following types:

SRB 301LC/B SRB 301LC/B-R

Only if the information described in this operating instructions manual are realised correctly, the safety function and therefore the compliance with the Machinery Directive is maintained.

2.2 Special versions

For special versions, which are not listed in the order code below 2.1, these specifications apply accordingly, provided that they correspond to the standard version.

2.3 Purpose

The safety-monitoring modules for integration in safety circuits are designed for fitting in control cabinets. They are used for the safe evaluation of the signals of positive break position switches or magnetic safety sensors for safety functions on sliding, hinged and removable safety guards as well as emergency stop control devices and AOPD's.

The safety function is defined as the opening of the enabling circuits 13-14, 23-24 and 33-34 when the inputs S11-S12 and/or S11-S22 are opened. The safety-relevant current paths with the outputs contacts 13-14, 23-24 and 33-34 meet the following requirements under observation of a PFH value assessment (also refer to chapter 2.5 "Safety classification"):

- Control category 4 PL e to ISO 13849-1
- SIL 3 to IEC 61508-2
- SILCL 3 to IEC 62061

To determine the Performance Level (PL) to ISO 13849-1 of the entire safety function (e.g. sensor, logic, actuator), an assessment of all relevant components is required.

The entire concept of the control system in which the safety component is integrated, must be validated to the relevant standards.

2.4 Technical data

General data:	
Standards:	EN 60204-1, EN 60947-5-1;
otandards.	ISO 13849-1, IEC 61508
Climate resistance:	EN 60068-2-78
Mounting: snap	os onto standard DIN rail to EN 60715
Terminal designations:	EN 60947-1
Material of the housings:	Plastic, glass-fibre reinforced
Material of the contractor	thermoplastic, ventilated
Material of the contacts:	AgSnO, self-cleaning, positive drive
Weight: Start conditions:	230 g Automatic or start button
Feedback circuit (Y/N):	yes
Pull-in delay for automatic start	,,,,
- LC/B:	300 ms
- LC/B-R:	50 ms
Pull-in delay with reset button:	20 ms
Drop-out delay in case of "emerge	ncy stop": 25 ms
Mechanical data: Connection type:	Screw connection
Min. cable section:	0.25 mm ²
Max. cable section:	2.5 mm ²
Connecting cable:	rigid or flexible
Tightening torque for the terminals	
With removable terminals (Y/N):	Nein
Mechanical life:	10 million operations
Electrical life:	Derating curve available on request
Resistance to shock: Resistance to vibrations to EN 600	10 g / 11 ms 168-2-6: 10 55 Hz,
Resistance to vibrations to EN 600	amplitude 0.35 mm
Ambient conditions:	ampillade 0.33 min
Ambient temperature:	−25 °C +45 °C
Storage and transport temperature	
Protection class:	Enclosure: IP40
	Terminals: IP20
Air alagraph and an an an	Clearance: IP54
Air clearances and creepage distances to IEC 60664-1:	4 kV/2 (basic insulation)
EMC rating:	to EMC Directive
Electrical data:	to Live Bridging
Contact resistance in new state:	max. 100 mΩ
Power consumption:	max. 1.7 W / 1.9 VA
Rated operating voltage U _e :	24 VDC -15% / +20%,
Rated operating voltage U _e :	24 VDC -15% / +20%, residual ripple max. 10%,

Operating instructions Safety-monitoring module

Utilisation category to IEC/EN 60947-5-1: AC-15 / DC-13: EN 60947-5-1:2007 Dimensions H x W x D: 100 mm x 22.5 mm x 121 mm

The data specified in this manual are applicable when the

component is operated with rated operating voltage U_e ±0%.

2.5 Safety classification

Standards:	ISO 13849-1, IEC 61508, IEC 62061
PL:	up to e
Control category:	up to 4
DC:	99% (high)
CCF:	> 65 points
PFH value:	≤ 2.00 × 10 ⁻⁸ /h
SIL:	up to 3
Service life:	20 years

The PFH value of 2.00×10^{-8} /h applies to the combinations of contact load (current through enabling contacts) and number of switching cycles $(n_{\mbox{\tiny op/y}})$ mentioned in the table below. At 365 operating days per year and a 24-hours operation, this results in the below-mentioned switching cycle times (t_{cycle}) for the relay contacts. Diverging applications upon request.

Contact load	$\mathbf{n}_{op/y}$	t _{cycle}
20 %	525,600	1.0 min
40 %	210,240	2.5 min
60 %	75,087	7.0 min
80 %	30,918	17.0 min
100 %	12,223	43.0 min

3. Mounting

3.1 General mounting instructions

Mounting: snaps onto standard DIN rails to EN 60715.

Snap the bottom of the enclosure slightly tilted forwards in the DIN rail and push up until it latches in position.

To avoid EMC disturbances, the physical ambient and operational conditions at the place where the product is installed, must meet the provisions laid down in the paragraph "Electromagnetic Compatibility (EMC)" of EN 60204-1.

3.2 Dimensions

All measurements in mm.

Device dimensions (H/W/D): 100 x 22.5 x 121 mm

4. Electrical connection

4.1 General information for electrical connection

As far as the electrical safety is concerned, the protection against unintentional contact of the connected and therefore electrically interconnected apparatus and the insulation of the feed cables must be designed for the highest voltage, which can occur in the device.

The electrical connection may only be carried out by authorised personnel in a de-energised condition.

Wiring examples: see appendix

5. Operating principle and settings

5.1 LED functions

- · K1: Status channel 1
- K2: Status channel 2
- U_B: Status operating voltage (LED is on, when the operating voltage on the terminals A1-A2 is ON)
- Ui: Status internal operating voltage (LED is on, when the operating voltage on the terminals A1-A2 is ON and the fuse has not been triggered).

Description of the terminals

Voltages:	A1	+24 VDC/24 VAC
	A2	0 VDC/24 VAC
Inputs:	S11-S12	Input channel 1 (+)
	S11-S22	Input channel 2 (+)
Outputs:	13-14	First safety enabling circuit
	23-24	Second safety enabling circuit
	33-34	Third safety enabling circuit
Start:	X1-X2	Feedback circuit and external reset
	41-42	Auxiliary NC contact as signalling
		contact

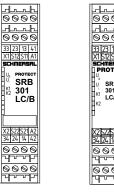

Fig. 1 Fig. 2

5.2 Notes

Signalling outputs must not be used in safety circuits.

6. Set-up and maintenance

6.1 Functional testing

The safety function of the safety-monitoring module must be tested. The following conditions must be previously checked and met:

- 1. Correct fixing
- 2. Check the integrity of the cable entry and connections
- 3. Check the safety-monitoring module's enclosure for damage
- 4. Check the electrical function of the connected sensors and their influence on the safety-monitoring module and the downstream actuators

6.2 Maintenance

A regular visual inspection and functional test, including the following steps, is recommended:

- 1. Check the correct fixing of the safety-monitoring module
- 2. Check the cable for damages
- Check electrical function

If a manual functional check is necessary to detect a possible accumulation of faults, then this must take place during the intervals noted as follows:

- at least every month for PL e with category 3 or category 4 (according to ISO 13849-1) or SIL 3 with HFT (hardware fault tolerance) = 1 (according to IEC 62061);
- at least every 12 months for PL d with category 3 (according to ISO 13489-1) or SIL 2 with HFT (hardware fault tolerance) = 1 (according to IEC 62061).

Damaged or defective components must be replaced.

7. Disassembly and disposal

7.1 Disassembly

The safety-monitoring module must be disassembled in a de-energised condition only.

Push up the bottom of the enclosure and hang out slightly tilted forwards.

7.2 Disposal

The safety-monitoring module must be disposed of in an appropriate manner in accordance with the national prescriptions and legislations.

8. Appendix

8.1 Wiring examples

Dual-channel control, shown for a guard door monitor with two position switches where one has a positive break contact; with external reset button [®] (Fig. 2)

- Relay outputs: 2-channel control, suitable for increase incapacity or number of contacts by means of contactors or relays with positiveguided contacts.
- The control system recognises wire-breakage and earth faults in the monitoring circuit.

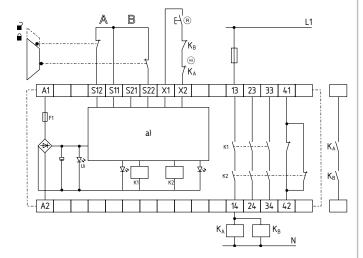

Fig. 2
a) Logic

⊕ = Feedback circuit

8.2 Start configuration

External reset button (Fig. 3)

- The external reset button is integrated in the feedback circuit in series.
- The manual start or the activation of the module occurs when the button is pressed (not when it is released!).

Automatic start (see Fig. 4)

- The automatic start is programmed by connecting the feedback circuit to the terminals X1-X2. If the feedback circuit is not required, establish a bridge.
- Caution: Not admitted without additional measure due to the risk of gaining access by stepping behind!
- When the safety-monitoring modules are used with the operating mode "Automatic start", an automatic restart after a shutdown in case of emergency must be prevented by the upstream control to EN 60204-1 paragraph 9.2.5.4.2.

8.3 Sensor configuration

Single-channel emergency stop circuit with command devices to ISO 13850 and EN 60947-5-5 (Fig. 5)

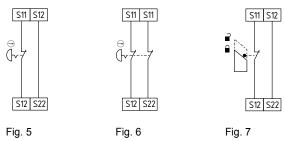

- Wire breakage and earth leakage in the control circuits are detected.
- Category 1 PL c to ISO 13849-1 possible.

Dual-channel emergency stop circuit with command devices to ISO 13850 and EN 60947-5-5 (Fig. 6)

- Wire breakage and earth leakage in the control circuits are detected.
- · Cross-wire shorts between the control circuits are not detected.
- Control category 4 PL e to ISO 13849-1 possible (with protective wiring)

Single-channel guard door monitoring circuit with interlocking devices to ISO 14119 (Fig. 7)

- At least one contact with positive break required.
- Wire breakage and earth leakage in the control circuits are detected.
- Category 1 PL c to ISO 13849-1 possible.

Dual-channel guard door monitoring circuit with interlocking device to ISO 14119 (Fig. 8)

- · With at least one positive-break position switch
- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the control circuits are not detected.
- Control category 4 PL e to ISO 13849-1 possible (with protective wiring)

Dual-channel control of magnetic safety switches to EN 60947-5-3 (see Fig. 9)

- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the control circuits are not detected.
- Category 3 PL e to ISO 13849-1 possible.

Operating instructions Safety-monitoring module

The connection of magnetic safety switches to the SRB 301LC/B safety-monitoring module is only admitted when the requirements of the standard EN 60947-5-3:2005 are observed.

As the technical data are regarded, the following minimum requirements must be met:

- switching capacity: min. 240 mW
- switching voltage: min. 24 VDC
- switching current: min. 10 mA

For example, the following safety sensors meet the requirements:

- BNS 33-02z-2187, BNS 33-02zG-2187
- BNS 260-02z, BNS 260-02zG
- BNS 260-02-01z, BNS 260-02-01zG

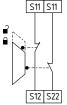

When sensors with LED are wired in the control circuit (protective circuit), the following rated operating voltage must be observed and respected:

- 24 VDC with a max. tolerance of -5 %/+ 20 %
- 24 VAC with a max. tolerance of -5 %/+ 10 %

Otherwise availability problems could occur, especially in series-wired sensors, where a voltage drop in the control circuit is triggered by LED's for instance.

Dual-channel control of a safety-related (microprocessor-based) safety guards with p-type transistor outputs e.g. AOPD's to IEC 61496-1 (Fig. 10)

- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the monitoring circuits are usually detected by the safety guards. The safety-monitoring module therefore is not equipped with a cross-wire short detection.
- If cross-wire shorts in the control circuits are detected by the safety guard: Control category 4 PL e to ISO 13849-1 possible.

Fig. 10

8.4 Actuator configuration

Single-channel control with feedback circuit (Fig. 11)

- Suitable for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- e = feedback circuit: If the feedback circuit is not required, establish a bridge.

Dual-channel control with feedback circuit (Fig. 12)

- Suitable for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- e = feedback circuit: If the feedback circuit is not required, establish a bridge.

9. EU Declaration of conformity

EU Declaration of conformity

9 SCHMERSAL

K.A. Schmersal GmbH & Co. KG Original

Möddinghofe 30 42279 Wuppertal Germany

Internet: www.schmersal.com

We hereby certify that the hereafter described components both in their basic design and construction conform

to the applicable European Directives.

Name of the component: SRB 301LC/B

SRB301LC/B-R

Description of the component: Safety-monitoring module for emergency stop circuits,

guard door monitoring, magnetic safety switches and AOPDs

Relevant Directives: Machinery Directive 2006/42/EC

EMC-Directive 2014/30/EU RoHS-Directive 2011/65/EU

Applied standards: EN 60947-5-1:2004 + AC:2005 + A1:2009,

EN ISO 13849-1:2015, EN ISO 13849-2:2012, ISO 13850:2015, EN 61326-3-1:2008

Notified body, which approved TÜV Rheinland Industrie Service GmbH

the full quality assurance system, Alboinstr. 56, 12103 Berlin

referred to in Appendix X, 2006/42/EC: ID n°: 0035

Person authorised for the compilation

Oliver Wacker of the technical documentation: Möddinghofe 30
