DH-485 Network	28
SynchLink Communication	31

Separate communication-interface modules are available for different networks. Install multiple communication-interface modules into the ControlLogix® backplane to configure a gateway to bridge or route control and information data between different networks. You do not need a ControlLogix controller in the chassis.

## Additional Resources

These documents contain additional information concerning related products from Rockwell Automation®.

Resource	Description
Industrial Automation Wiring and Grounding Guidelines, publication <a href="#">1770-4.1</a> .	Provides general guidelines for installing a Rockwell Automation industrial system.
Product Certifications website, <a href="http://www.ab.com">http://www.ab.com</a>	Provides declarations of conformity, certificates, and other certification details.

You can view or download publications at <http://www.rockwellautomation.com/literature/>. To order paper copies of technical documentation, contact your local Allen-Bradley® distributor or Rockwell Automation sales representative.

## Available Communication Modules

Network	Cat. No.	Description	Page
EtherNet/IP	1756-EN2F	EtherNet/IP bridge, fiber, 256 Logix connections	4
	1756-EN2T	EtherNet/IP bridge, copper, 256 Logix connections	4
	1756-EN2TR	EtherNet/IP bridge, embedded switch, copper Supports as many as 8 axis of motion	4
	1756-EN3TR	EtherNet/IP bridge, embedded switch, copper Supports as many as 128 axis of motion	4
	1756-ENBT	EtherNet/IP bridge, copper, 128 Logix connections	4
	1756-EWEB	Ethernet web server, 128 Logix connections, Class 3 messaging only	4
	1756-EN2TXT	ControlLogix-XT™, EtherNet/IP bridge, copper, 256 Logix connections	6
ControlNet	1756-CN2/B, 1756-CN2R/B	ControlNet bridge, 128 Logix connections <sup>(1)</sup>	11
	1756-CNB, 1756-CNBR	ControlNet bridge, 64 connections; recommend using only 40...48 Logix connections for I/O	11
	1756-CN2RXT	ControlLogix-XT, ControlNet bridge, 128 Logix connections <sup>(1)</sup>	11
DeviceNet	1756-DNB/E	DeviceNet bridge	17
Data Highway Plus™	1756-DHRI0	Data Highway Plus/Remote I/O module	21
	1756-DHRI0XT	ControlLogix-XT, Data Highway Plus/Remote I/O module	23
Remote I/O	1756-DHRI0	Data Highway Plus/Remote I/O module	21
	1756-RIO/B	Remote I/O module	21
	1756-DHRI0XT	ControlLogix-XT, Data Highway Plus/Remote I/O module	23
Foundation Fieldbus	1757-FFLD2, 1757-FFLD4	Foundation Fieldbus linking device bridges from an Ethernet network to either two or four H1 ports	25
	1757-FFLDC2, 1757-FFLDC4	Foundation Fieldbus linking device bridges from a ControlNet network to either two or four H1 ports	25
Serial	1756-DH485	Compatible with RS-232 serial communication, supports the DF1 protocol, send and receive messages, does not support remote programming and monitoring	28
SynchLink™	1756-SYNCH	SynchLink fiber-optic communication link	31

(1) 128 connections are available for standard use. An additional three connections are reserved for redundant control.

## Communication Connections

A ControlLogix system uses connections to establish communication links between devices. The types of connections include the following:

- Controller-to-local I/O modules or local communication modules
- Controller-to-remote I/O or remote communication modules
- Controller-to-remote I/O (rack-optimized) modules
- Produced and consumed tags
- Messages
- Controller access by RSLogix™ 5000 software
- Controller access by RSLinx® software for HMI or other applications

You indirectly determine the number of connections the controller uses by configuring the controller to communicate with other devices in the system. The limit of connections may ultimately reside in the communication module you use for the connection. If a message path routes through a communication module, the connection related to the message also counts towards the connection limit of that communication module.

## EtherNet/IP Network

The Ethernet Industrial (EtherNet/IP) network protocol is an open industrial-networking standard that supports both real-time I/O messaging and message exchange. The EtherNet/IP network uses off-the-shelf Ethernet communication chips and physical media.

If you need to	Select this interface
<ul style="list-style-type: none"> <li>• Control I/O modules and drives</li> <li>• Act as an adapter for I/O on remote EtherNet/IP links</li> <li>• Communicate with other EtherNet/IP devices (messages and HMI)</li> <li>• Bridge EtherNet/IP links to route messages to devices on other networks</li> </ul>	1756-EN2F bridge 1756-EN2T bridge 1756-ENBT bridge
Support device level ring (DLR) and linear topologies	1756-EN2TR bridge 1756-EN3TR bridge
Provide control in environments where temperatures range from -25...70 °C (-13...158 °F)	1756-EN2TXT bridge
<ul style="list-style-type: none"> <li>• Use an Internet browser to remotely access tags in a ControlLogix controller</li> <li>• Communicate with other EtherNet/IP or generic Ethernet devices (messaging only; no I/O control)</li> <li>• Bridge EtherNet/IP links to route messages to devices on other networks</li> </ul>	1756-EWEB web server

## Accessories—Ethernet Network

<b>Cat. No.</b>	<b>Description</b>	<b>Specifications</b>
1585J-M8PBJM-x	Ethernet RJ45 patchcord $x = 2$ (2 m), 5 (5 m), or 10 (10 m)	8-conductor, Teal Riser PVC Cable (flex Rated cable also available)
1585J-M8CC-H	RJ45 insulation displacement connector (IDC)	0.128...0.325 mm <sup>2</sup> (26...22 AWG), Cat. 6, IDC, no tool required
1585J-M8CC-C	RJ45 crimp connector with boot, qty = 50 pieces	0.128...0.205 mm <sup>2</sup> (26...24 AWG), Cat. 5e, requires crimp tool for assembly
1585A-JCRIMP	Crimp tool	—
9300-RADES	Remote access dial-in kit	56 Kbps modem connection to devices on an Ethernet network

## Stratix Switches

To effectively manage real-time control and information flow throughout the manufacturing and IT enterprise, Rockwell Automation offers a full portfolio of industrial Ethernet switches and media, including a line of Stratix switches integrated with Cisco technology. The Stratix line of switches includes modular managed, fixed managed, and unmanaged switches.

If your application	Select
<ul style="list-style-type: none"> <li>Requires Layer 3 routing</li> <li>Integrates enterprise and manufacturing environments</li> <li>Manages multicast traffic</li> <li>Requires diagnostics data</li> <li>Requires security options</li> </ul>	Stratix 8300™ modular, managed switch
<ul style="list-style-type: none"> <li>Integrates enterprise and manufacturing environments</li> <li>Manages multicast traffic</li> <li>Requires diagnostics data</li> <li>Requires security options</li> </ul>	Stratix 8000™ modular, managed switch
<ul style="list-style-type: none"> <li>Integrates plant floor devices</li> <li>Manages multicast traffic</li> <li>Requires diagnostics data</li> <li>Requires security options</li> </ul>	Stratix 6000™ fixed, managed switch
<ul style="list-style-type: none"> <li>Requires easy setup and direct replacement of switches</li> <li>Is a small, isolated network</li> </ul>	Stratix 2000™ unmanaged switch

**Table 7 - Stratix Managed Switch Specifications**

	Stratix 8000 and Stratix 8300						Stratix 6000	
Feature	Base	Base	Base	Base	Expansion	Expansion	1783-EMS04T	1783-EMS08T
Ports per module	6		10		8		4	9
Layer 3 routing	No	Yes	No	Yes	No	No	No	No
Total ports, max	Up to 26 <sup>(1)</sup>						—	—
Fiber ports	0...10 <sup>(1)</sup>						—	1
10/100 copper ports	4...24 <sup>(1)</sup>						4	8
100 base LC fiber ports	0...8 <sup>(1)</sup>						—	—
SFP slots	2 <sup>(2)</sup>						—	1
10/100/1000 copper ports	2 <sup>(2)</sup>						—	—
100 Mbps fiber support	Yes			—	Yes	No	No	No
1 G fiber support	Yes			—	—	No	Yes	
CompactFlash memory	Yes						No	No
Power requirements	24/48V DC (18...60V DC)						24V DC (12...48V DC)	

(1) Maximum port counts require expansion ports.

(2) Two ports each can be used for SFP or 10/100/1000 copper.

**Table 8 - Stratix Unmanaged Switch Specifications**

	<b>Stratix 2000</b>			
<b>Feature</b>	<b>1783-US03T01F</b>	<b>1783-US05T</b>	<b>1783-US06T01F</b>	<b>1783-US08T</b>
Ports per module	4	5	7	8
Fiber ports	1	—	1	—

100 base LC fiber ports	1	—	1	—
100 Mbps fiber support	Yes	—	Yes	—
CompactFlash memory	No	No	No	No
Power requirements	20V AC (10...24V AC) 24V DC (10...35V DC)			

## ControlNet Network

The ControlNet network is an open, control network for real-time, high-throughput applications. The ControlNet network uses the Common Industrial Protocol (CIP) to combine the functionality of an I/O network and a peer-to-peer network providing high-speed performance for both functions. The ControlNet network gives you deterministic, repeatable transfers of all mission-critical control data in addition to supporting transfers of non-time-critical data. I/O updates and controller-to-controller interlocking always take precedence over program uploads and downloads, and messaging.

<b>If your application requires</b>	<b>Select this interface</b>
128 ControlNet connections per communication module	1756-CN2/B 1756-CN2R/B 1756-CN2RXT/B
Control in environments where temperatures range from -25...70 °C (-13...158 °F)	1756-CN2RXT
40...48 ControlNet connections per communication module	1756-CNB 1756-CNBR

## Connect to Other Devices via a ControlNet Network

The RSLogix 5000 Enterprise Series software supports a generic ControlNet module that allows connections to ControlNet nodes for which there is no specific support currently available in the programming software. A module configured as a generic ControlNet module communicates with the controller in the form of input, output, status, and configuration tags.

For example, use the generic module configuration to set up communication between a ControlLogix controller and a 1203-CN1 ControlNet communication module. Then use the CIP generic MSG instruction type to send and receive messages from the 1203-CN1 module.

**Table 9 - Technical Specifications - 1756 ControlNet Modules**

Attribute	1756-CN2/B	1756-CN2R/B	1756-CNB/E	1756-CNBR/E		
Configuration	Standard	Redundant	Standard	Redundant		
ControlNet communication rate	5 Mbps					
Logix communication connections	128		40...48			
Connections supported, max	131 <sup>(3)</sup>		64			
Number of nodes, max	99					
Current draw @ 5.1V DC	1100 mA	1300 mA	970 mA			
Current draw @ 24V DC	3 mA		1.7 mA			
Power dissipation	5.7 W	6.7 W	5.14 W			
Thermal dissipation	19.5 BTU/hr	22.9 BTU/hr	17.5 BTU/hr			
Isolation voltage	Standard: 30V (continuous), basic insulation type, ControlNet network to backplane Redundant: 30V (continuous), basic insulation type, ControlNet A/B to backplane, and ControlNet A to ControlNet B No isolation between NAP or USB and backplane Type tested at 500V AC for 60 s

## Accessories—ControlNet Network

<b>Cat. No.</b>	<b>Description</b>
<b>Taps</b>	
1786-TCT2BD1	T-tap straight IP67 rated
1786-TPR	T-tap right angle
1786-TPS	T-tap straight
1786-TPYR	Y-tap right angle
1786-TPYS	Y-tap straight
<b>Cables</b>	
1786-CP	Programming cable to ControlNet RJ45 port
1786-RG6	ControlNet network, shield high-flex cable
1756-RG6F	ControlNet network, quad-shield high-flex coax cable
<b>Other</b>	
1786-TNCLXT4	ControlNet IP67 termination resistor
1786-XT	ControlNet termination resistor
<b>Repeaters</b>	
1786-RPA	ControlNet modular repeater adapter
1786-RPCD	ControlNet coaxial hub repeater
1786-RPFRL	ControlNet fiber ring repeater, long distance
1786-RPFRXL	ControlNet fiber ring repeater, extra long distance
1786-RPFS	ControlNet fiber repeater, short distance
1786-RPFM	ControlNet fiber repeater, medium distance

For more information, see ControlNet Media System Components List, publication [AG-PA002](#).

## DeviceNet Network

The DeviceNet network is an open, low-level network that provides connections between simple industrial devices, such as sensors and actuators, and higher-level devices, such as controllers and computers. The DeviceNet network uses the proven Common Industrial Protocol (CIP) to provide the control, configure, and data collection capabilities for industrial devices.

**ATTENTION:** If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**Table 15 - Technical Specifications - 1756-DNB/E DeviceNet Module**

Attribute	1756-DNB/E
DeviceNet communication rate	125 Kbps (500 m max) 250 Kbps (250 m max) 500 Kbps (100 m max)
Number of nodes, max	64
Current draw @ 5.1V DC	400 mA
Current draw @ 24V DC	0 mA
DeviceNet current draw @ 24V DC	60 mA
DeviceNet voltage range	11...25V DC CL 2/SELV
Power dissipation	3.5 W
Thermal dissipation	11.9 BTU/hr
Isolation voltage	50V (continuous), basic insulation type, DeviceNet network to backplane Type tested at 853V AC for 60 s No isolation between USB and backplane
Slot width	1
Module location	Chassis-based, any slot
Chassis	1756-A4, 1756-A7, 1756-A10, 1756-A13, 1756-A17
Power supply, standard	1756-PA72/C, 1756-PA75/B, 1756-PB72/C, 1756-PB75/B, 1756-PC75/B, 1756-PH75/B
Power supply, redundant	1756-PA75R, 1756-PB75R, 1756-PSCA2
DeviceNet power	To comply with the CE low voltage directive (LVD), the DeviceNet network must be powered from a source compliant with the safety extra low voltage (SELV) or protected extra low voltage (PELV). To comply with UL restrictions, the DeviceNet network must be powered from a source compliant with Class 2 or limited voltage/current.
DeviceNet port	1 DeviceNet open-style 5-or 10-pin linear plug
DeviceNet connector torque	0.56...0.79 N·m (5...7 lb-in)
USB port <sup>(1)</sup>	USB 2.0, full speed (12 Mbps)
Wire category <sup>(2)</sup>	1—On DeviceNet ports 3—On USB ports
North American temperature code	T4A
IEC temperature code	T4
Enclosure type rating	None (open-style)

(1) The USB port is intended for temporary local programming purposes only and not intended for permanent connection. Do not use the USB port in hazardous locations.

(2) Use this conductor category information for planning conductor routing as described in the system level installation manual. See the Industrial Automation Wiring and Grounding Guidelines, publication [1770-4.1](#). Refer to the DeviceNet Media Design and Planning Guide, publication [DNET-UM072](#), for information specific to your DeviceNet network.

**Table 16 - Environmental Specifications - 1756-DNB/E DeviceNet Module**

<b>Attribute</b>	<b>1756-DNB/E</b>
Temperature, operating IEC 60068-2-1 (Test Ad, Operating Cold) IEC 60068-2-2 (Test Bd, Operating Dry Heat) IEC 60068-2-14 (Test Nb, Operating Thermal Shock)	0...60 °C (32...140 °F)
Temperature, surrounding air, max	60 °C (140 °F)

(1) When product is marked. See the Product Certification link at <http://www.ab.com> for Declarations of Conformity, Certificates, and other certification details.

## Accessories—DeviceNet Network

Cat. No.	Description
KwikLink™ Lite flat media	KwikLink Lite flat media is a newer, ODVA-approved solution for wiring DeviceNet networks. Drop-lines for connecting nodes are added by using the KwikLink Lite two-piece connectors. This cable system supports the intermixing of DeviceNet cable types (thin-round with flat). All of the KwikLink Lite connectors provide insulation displacement technology with reduced assembly time.
KwikLink flat media	The KwikLink flat media system provides a modular cabling method with its flat four-wire cable and Insulation Displacement Connectors (IDCs). The KwikLink system allows nodes to be added to the network without severing the trunkline. Cutting or stripping of the trunkline is eliminated, as is the need for predetermined cable lengths.
Round media	Round trunk cable is available in bulk spools or as pre-molded cordsets or patchcords in varying lengths. A wide variety of rugged, durable DeviceNet components is available for use in round trunk systems. Stainless steel versions of round cable system components are also available: <ul style="list-style-type: none"> <li>• Thick-trunk round media systems use thick cable for maximum DeviceNet trunk line length.</li> <li>• Round media thin-trunk systems use thin cable to reduce maximum trunk line distances with a more compact and cost-effective installation for some applications. Thin-cable outer jacket material is TPE for additional chemical resistance.</li> </ul>

For more information on selecting DeviceNet media, see the NetLinx™ Selection Guide, publication [NETS-SG001](#).

## DH+ and Remote I/O Networks

The Data Highway Plus network supports messaging between devices. The remote I/O link connects to remote I/O chassis and other intelligent devices.

The 1756-DHRIOP module supports messaging between devices on DH+™ networks. The remote I/O functionality enables the module to act as a scanner for transferring digital and block-transfer data to and from remote I/O devices.

The 1756-RIO module can act as a scanner or adapter on a remote I/O network. In addition to digital and block-transfer data, the 1756-RIO module transfers analog and specialty data without message instructions.

### Example Configuration—DH+ Network

### Example Configuration—Remote I/O Network

**Table 18 - Technical Specifications - 1756 DH+ and Remote I/O Modules**

<b>Attribute</b>	<b>1756-DHRI0</b>	<b>1756-RIO/B</b>
Communication rate	57.6 Kbps, 115.2 Kbps, 230.4 Kbps	57.6 Kbps, 115.2 Kbps, 230.4 Kbps
Remote I/O communication	Remote I/O scanner only 32 logical rack connections per remote I/O channel 16 block-transfer connections per remote I/O channel	Remote I/O scanner or adapter 32 physical racks (0...76), any combination of rack size and block transfers
Connections supported, max	32	10 scheduled I/O
Current draw @ 5.1V DC	850 mA	450 mA
Current draw @ 24V DC	1.7 mA	5 mA
Power dissipation	4.5 W	2.5 W
Thermal dissipation	15.4 BTU/hr	8.5 BTU/hr
Isolation voltage	30V (continuous), basic insulation type, DHRI0 A/B to backplane, and DHRI0 A/programming port to DHRI0 B No isolation between DHRI0 A and Programming port Type tested at 877V DC for 60 s	50V (continuous), basic insulation type, RIO communication lines to backplane Type tested at 500V AC for 60 s
Slot width	1	
Module location	Chassis-based, any slot

## Accessories—DH+ and Remote I/O Networks

Cat. No.	Description	Specifications
1770-CD	Cable to connect communication module to DH+ network	Belden 9463 twinaxial
9300-RADKIT	Remote access dial-in kit	56 Kbps modem connection to devices on a DH+ network, including the following: <ul style="list-style-type: none"> <li>• Preconfigured modem</li> <li>• Communication module</li> <li>• DIN rail mounting hardware</li> <li>• Associated cables</li> </ul>

## FOUNDATION Fieldbus Network

The FOUNDATION Fieldbus network is a communication network created by the Fieldbus Foundation. It is a protocol designed for robust, distributed control of process control applications. Devices connected by a FOUNDATION Fieldbus network can be used for sophisticated, highly-distributed process control.

If your application bridges from	Select	Description
EtherNet/IP network	1757-FFLD2 1757-FFLD4	The 1757-FFLDx linking device bridges from an EtherNet/IP network to either two or four H1 ports. Each H1 port can support the recommended maximum 8...10 devices. Each H1 network can support a maximum of 16 publisher and 16 subscriber VCR connections.
ControlNet network	1757-FFLDC2 1757-FFLDC4	The 1757-FFLDCx linking device bridges from a ControlNet network to either two or four H1 ports. Each H1 port can support the recommended maximum 8...10 devices. Each H1 network can support a maximum of 64 publisher and 64 subscriber VCR connections. The 1757-FFLDCx linking device is compatible with ControlLogix redundancy and supports redundant ControlNet media.

## Accessories—Foundation Fieldbus Network

Cat. No.	Description
DIN rail	35 x 7.5 or 35 x 15 DIN (EN 50 022), zinc-plated yellow chromate steel

## DH-485 Network

On the DH-485 network, the controller can send and receive messages to and from other controllers on the network. The DH-485 connection does support remote programming and monitoring via RSLogix 5000 software. Excessive traffic over a DH-485 connection can adversely affect overall performance and can lead to timeouts and loss in RSLogix 5000 configuration performance.

**IMPORTANT** Use Logix5000™ controllers on DH-485 networks only when you want to add controllers to an existing DH-485 network. For new applications with Logix5000 controllers, we recommend open architecture networks.

You need a 1761-NET-AIC converter for each controller on the DH-485 network. You can have two controllers per one 1761-NET-AIC converter, but you need a different cable for each controller. Connect one controller to port 1 (9-pin connector) and one controller to port 2 (mini-DIN connector).

To connect to this port	Use this cable
Port 1 DB-9 RS-232, DTE connection	1747-CP3, 1761-CBL-AC00
Port 2 mini-DIN 8 RS-232 connection	1761-CBL-AP00, 1761-CBL-PM02

**Table 27 - Technical Specifications - 1756-DH485 Module**

## SynchLink Communication

The SynchLink module provides time synchronization and data broadcasting capabilities for distributed motion and coordinated drive control. The 1756-SYNCH SynchLink module connects a ControlLogix chassis to a SynchLink fiber-optic communication link. The module does the following:

- Coordinates Coordinated System Time across multiple ControlLogix chassis
- Moves a limited amount of data from one chassis to another at a high speed
- Lets one controller consume motion axes data from a controller in another chassis

**Table 30 - Technical Specifications - 1756-SYNCH Module**

Attribute	1756-SYNCH
SynchLink data rate	5 Mbps
Operating wavelength	650 nm (red)
Type of communication	Synchronous
Frame period	50 µs
Frame parameters	3 Flags - 3 bytes Control field - 1 byte Data field - 24 bytes CRC field - 2 bytes

1403-CFxx	Fiber-optic cable assembly (Rockwell Automation)
HCP-M0200T V01RK	Lucent Technologies 200 µm simplex cable

## **Important User Information**

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (publication [SGI-1.1](#) available from your local Rockwell Automation sales office or online at <http://www.rockwellautomation.com/literature/>) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this publication are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

## **Documentation Feedback**

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication [RA-DU002](#), available at <http://www.rockwellautomation.com/literature/>.
