Function

EASY 621-TC-DC is an electronic control relay with logic, time, counting and clock timing functions. It is designed for small, convenient control tasks, e. g. in machine and plant engineering. The circuit diagram is "wired" in the ladder diagram technique and directly given in the in the display.

The combinations of an EASY 205-ASI AS-Interface with the control relay provides an intelligent AS-i slave, which can perform extremely flexible, decentralised control tasks and information processing. So the relay remains autonomous: i. e. in the event of a bus failure, it can continue operating on its own.

The combination can be addressed via the master or the addressing socket on the interface module, the exchange of information to the AS-i master is provided by the 4 inputs and the 4 outputs as well as the 4 bit parameters of the interface module.
